

Exercise: Creating Microservices for Account and Loan

Description:

This exercise demonstrates the creation of a simple Spring Boot Account microservice that exposes a REST API to fetch account details using an account number. The service returns a dummy JSON response without database connectivity, illustrating the basic structure and execution of an independent microservice.

Output

The screenshot shows a web browser window with the address bar displaying `localhost:8080/accounts/00987987973432`. The browser tabs include "Spring Initializr" and "localhost:8080/accounts/00987". A "Ask Gemini" button is visible in the top right corner. The main content area displays a JSON response: `{"number": "00987987973432", "type": "savings", "balance": 234343.0}`. The browser interface includes standard navigation buttons, a "Pretty-print" toggle, and a Windows taskbar at the bottom showing the date as 15-07-2026 and time as 10:29.

```
{ "number": "00987987973432", "type": "savings", "balance": 234343.0 }
```
