

ReactJS Hands-on Labs (Exercises 9–13)

Exercise 9: ES6 Features – Cricket App

Implemented ES6 features such as `map()`, `filter()`, arrow functions, destructuring, and array merging. The application displays player details and filters players based on their scores.

Exercise 10: JSX – Office Space Rental App

Developed a JSX-based React application to display office space details using objects and arrays. Applied conditional inline styling to highlight rent values based on the specified condition.

Office Space, at Affordable Range

Name: DBS

Rent: Rs. 50000

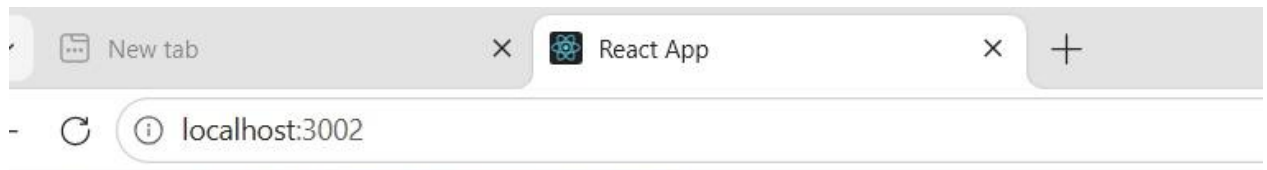

Address: Chennai

Name: SmartWorks

Rent: Rs. 90000

Address: Pune

Name: WeWork

Rent: Rs. 75000

Address: Bangalore

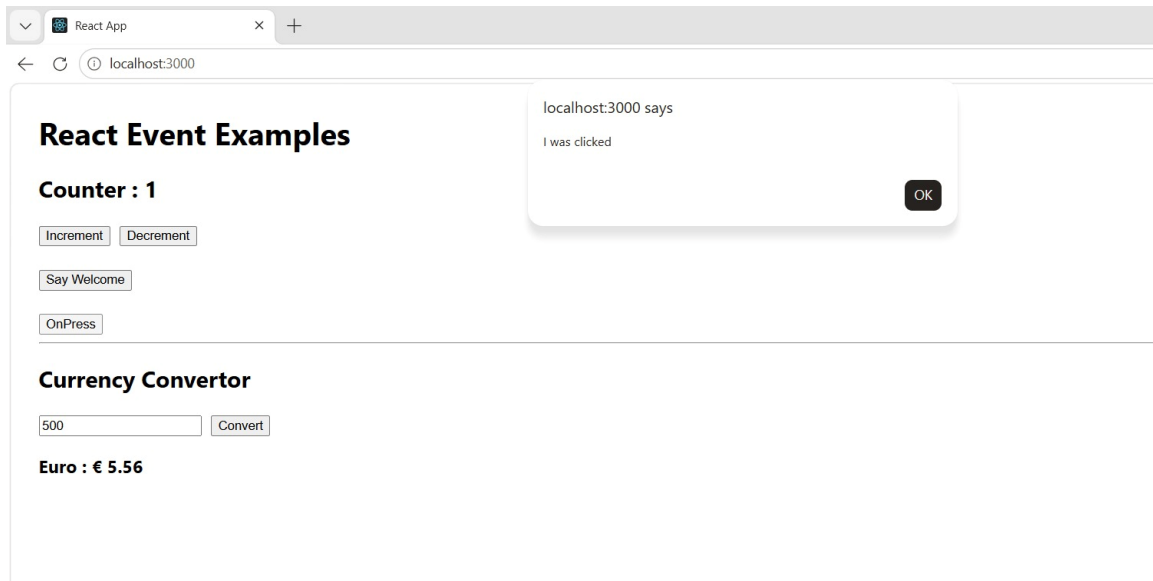

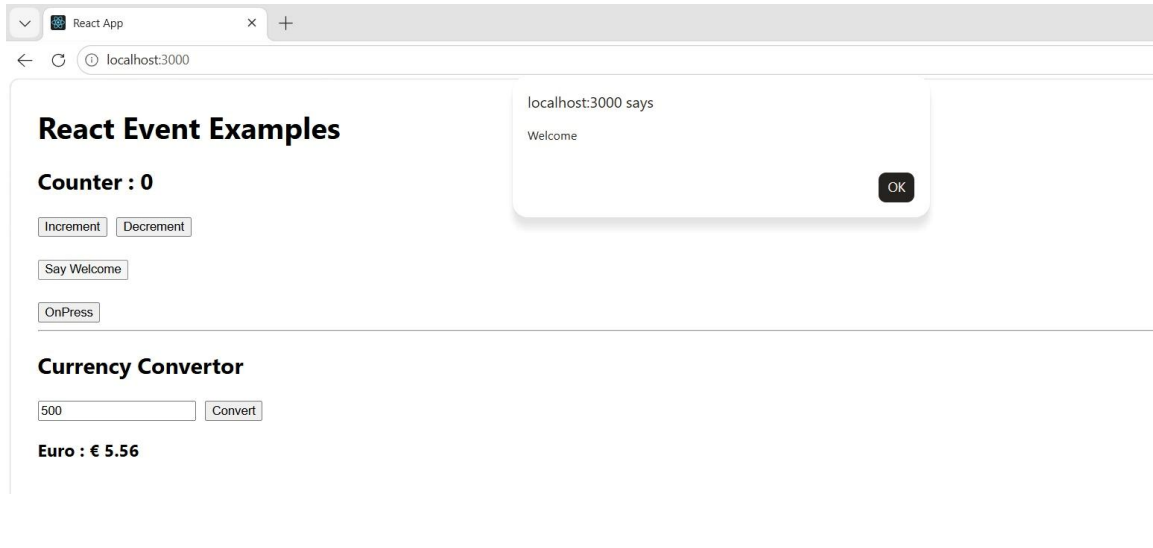

Name: Regus

Rent: Rs. 45000

Address: Hyderabad

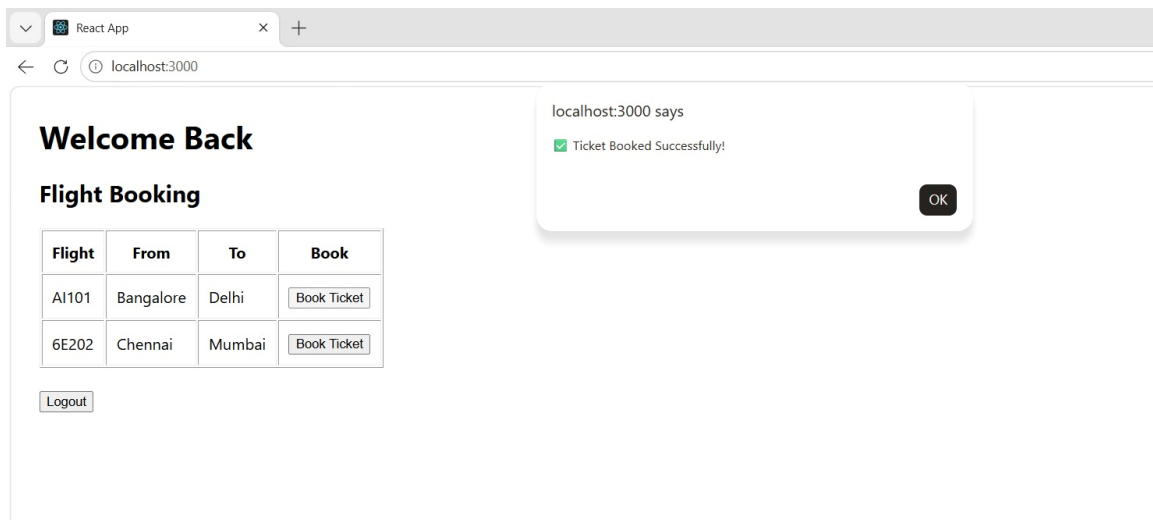

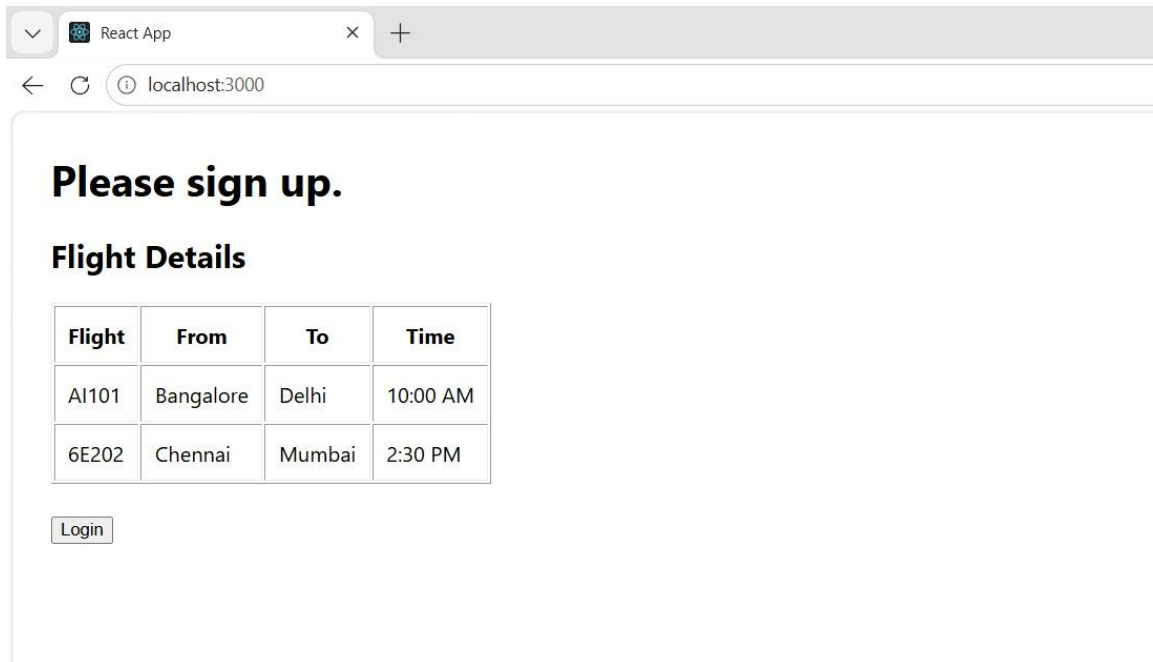

Exercise 11: Event Handling – Event Examples App

Implemented React event handling using buttons, event handlers, alerts, and a currency converter. Demonstrates multiple function calls and synthetic events.

Exercise 12: Conditional Rendering – Ticket Booking App

Implemented conditional rendering using Login and Logout buttons. Guest users can view flight details, while logged-in users can access ticket booking.

Exercise 13: Conditional Rendering and Lists – Blogger App

Created separate components for Course, Book, and Blog details. Used conditional rendering and the `map()` function to display lists with React keys.
